THE IFRA FRAGRANCE INGREDIENT GLOSSARY

IFRAFRAGRANCE.ORG/GLOSSARY

 **FRAGRANCE
INGREDIENT
GLOSSARY**

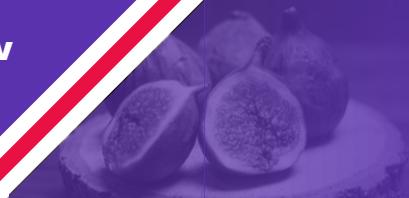

WELCOME TO THE IFRA FIG

ONE / ABOUT THE IFRA FRAGRANCE INGREDIENT GLOSSARY

- The FIG is a harmonized glossary of positive olfactory descriptors of fragrance ingredients using simple terms and language.
- It is available for use – subject to compliance with the FIG terms of use – by the fragrance industry.
- The FIG highlights the fragrance industry's commitment to greater transparency and to building understanding and awareness of fragrance.

TWO / DEVELOPMENT OF THE IFRA FIG

- The FIG is the result of many months' work by a multi-country, multi-company Glossary Working Group led by Lisa Hipgrave of IFRA UK, and was the subject of a global consultation among IFRA members, including National Associations and their members.
- The Glossary Working Group included representatives of large, medium-sized and small fragrance houses from around the world. Team members include industry professionals with broad cross-functional expertise.

WELCOME TO THE IFRA FIG

THREE / **WHAT'S IN THE IFRA FIG?**

- The FIG covers all materials on the IFRA Transparency List (other than functional ingredients not used for odor-giving properties).
- The FIG includes the CAS number, principal name, primary descriptor and two other descriptors. Additional information may be included in further editions of the FIG.
- The FIG includes 'definitions' of the primary descriptor terms, and the terms of use.

FOUR / **USE OF THE IFRA FIG**

- The FIG has been subject to legal review. In compliance with competition law and legal advice, it is an inclusive and collaborative database that is covered by copyright and 'owned' by the industry.
- All use of the FIG, in whole or in part, must give credit to The International Fragrance Association (see terms of use for more details).
- The use of the FIG is voluntary. Members are encouraged to use the FIG, or to develop any alternative approaches should they wish to do so.

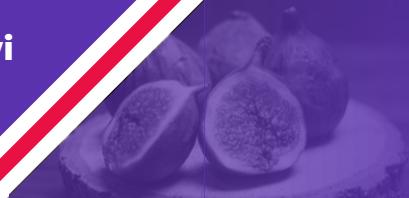

WELCOME TO THE IFRA FIG

FIVE / ACCESS TO THE IFRA FIG

- To facilitate access to the FIG this edition is being distributed by email to the IFRA membership.
- Other representatives of IFRA Regular and Supporting Members, IFRA National Associations, and members of IFRA National Associations, may request a copy of the document by visiting ifrafragrance.org/glossary.

SIX / UPDATES TO THE IFRA FIG

- **April 2020 update:** in line with name updates to the IFRA Transparency List, the relevant names and descriptors were also updated in the IFRA Fragrance Ingredient Glossary.

TERMS OF USE

1. The FIG has been subject to legal review. In compliance with competition law and legal advice, it is an inclusive and collaborative database that is covered by copyright and 'owned' by the industry.
2. All use of the FIG, in whole or in part, must give credit to The International Fragrance Association in this or a similar form: 'Information derived from the IFRA Fragrance Ingredient Glossary, developed by The International Fragrance Association'.
3. The use of the FIG is voluntary. Members are encouraged to use the FIG, or to develop any alternative approaches should they wish to do so.
4. Access to the FIG is subject to agreement with these terms of use and to compliance with other technological conditions that may be laid down.
5. Any questions about use of the FIG should be sent to the IFRA team via David O'Leary, IFRA Communications Director, at doleary@ifraorg.org

DECODING THE GLOSSARY

To enhance clarity about the terms used in the IFRA Fragrance Ingredient Glossary, we have developed a short summary of all the primary descriptors.

ACIDIC

Acidic means a fragrance note that smells sharp and somewhat pungent. Acidic notes may help boost a citrus note or impart natural qualities.

ALDEHYDIC

Aldehydes vary: the more diluted they become, the greater the difference in smell. An overarching description is one of clean ironed linen. Aldehydes can be split into more specific profiles, such as citrus or ozonic. They are organic compounds found in natural oils (e.g. orange oil or rose oil) and are used at relatively low doses.

AMBER

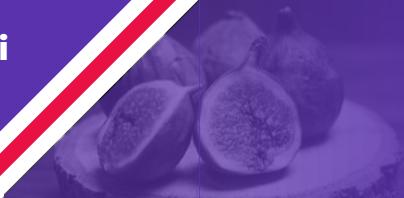

Amber is used to describe a complex note in fragrances that are a mixture of warm, woody and sweet notes that impart a rich and comforting character.

ANIMAL-LIKE

Animal-like notes are important notes used in perfumery. **They do not come from animals**, but are created to give what some would see as a faecal note or a musk note. In dilution they might help impart musk notes or floral notes like jasmin.

DECODING THE GLOSSARY

ANISIC

Anisic materials are those that smell similar to natural aniseed materials like tarragon or fennel.

AROMATIC

Aromatic notes are complex notes that are sometimes also described as having a diffusive aroma. They may be recognized in cooking as culinary herbs and spices, but they have a full fragrance quality.

BALSAMIC

Ingredients that smell balsamic tend to have a delicate smell that is slightly sweet and woody, and have been termed using natural resins and balsams exuded by some trees or shrubs.

CAMPHORACEOUS

A fresh, strong and diffusive smell that is characterized by natural camphor and other herbs such as rosemary or marjoram.

CITRUS

Citrus notes are given by the smell of fruit from the citrus family – such as orange, lemon or grapefruit.

DECODING THE GLOSSARY

EARTHY

Earthy notes are reminiscent of earth and mud. They are important when creating a fragrance that needs to impart the full character of a living flower or to give natural outdoor notes – allowing the creation of full landscape (e.g. a bed of roses on a wet day) as opposed to a single or specific smell.

FLORAL

Floral notes belong to the large floral family that includes notes such as rose, jasmin, narcissus and others. Some fragrance materials have smells that are not one flower but multi-faceted, with a complex flowery character.

FOOD-LIKE

Food-like describes food substances of a savoury or less specific character – such as the smell of roasted vegetables.

FRUITY

Fruity notes belong to the non-citrus fruit family. This is a very large family that includes many fruit notes such as banana, apple and mango. Some fruit fragrance materials have smells that are not one fruit but multi-faceted, with a complex fruity character.

GORMAND

This very important fragrance group has been popular for a number of years – with a food-like smell that is sweet, sticky, or dessert-like. It includes caramel, fudge, chocolate and meringue.

DECODING THE GLOSSARY

GREEN

Green is a broad descriptor that refers simply to those natural smells that are green – such as the distinctive scent of cut grass, hedgerow fruits flowers, and those green notes and many green materials that help impart natural smells in a more complex accord or mix of scents.

HERBAL

Herbal notes include culinary herbs (e.g. thyme, rosemary) that often have a green note and impart fresh nuances to a complex fragrance.

HONEY

Honey is used to describe materials that have honey characteristics – often sweet and cloying, but sometimes quite harsh and acidic.

MARINE

Marine covers smells that you expect to find at the seashore – they tend to be fresh and sometimes ozonic, and often sea water-like.

MINTY

These materials impart mint or menthol notes reminiscent of peppermint and spearmint.

DECODING THE GLOSSARY

MUSK-LIKE

These materials belong to an important fragrance note – while **they are not obtained from animals**, they are created to have an animal-like quality, often powdery and sometimes warm and sweet.

OZONIC

Ozonic notes are fresh-smelling materials that don't have a more specific note but may remind you of a fresh windy day. Sometimes they have a weak, almost chlorine-like smell.

POWDERY

Powdery fragrance ingredients are from a larger complex group that impart a warm, sometimes sweet or musky powdery smell.

SMOKY

These ingredients have a smoked or phenolic quality, reminding you of the smell from a bonfire or the smell of food burning.

SPICY

These ingredients belong to a broad spicy family, characterized by many spicy notes from cinnamon to other culinary spices such as pepper, nutmeg and clove. They sometimes have a sweet note and impart warm nuances to a complex fragrance.

DECODING THE GLOSSARY

SULFURIOUS

Sulfurous materials have a distinctive smell, reminiscent of onion or garlic. Some sulfur materials may be very pungent and unpleasant at high levels, but when used in a fragrance they may impart citrus or floral notes.

TOBACCO-LIKE

These ingredients are created to give an smell of tobacco before it has been lit or smoked. They tend to be sweet and warm notes, sometimes with the smell of dried fruit.

WOODY

Woody notes are part of a large odor family that includes woods such as sandalwood or cedarwood, sometimes with smoky or leather nuances. Often warm and dry notes, they impart a rich complexity that can help a fragrance last longer.
