### Benzaldehyde

**CAS-No.:** 100-52-7  
The scope of this Standard includes, but is not limited to the CAS number(s) indicated above; any other CAS number(s) used to identify this fragrance ingredient should be considered in scope as well.

**Synonyms:**  
- Benzenecarbalonal  
- Benzene carboxaldehyde  
- Benzenecarboxaldehyde  
- Benzenemethylal  
- Benzoic aldehyde  
- Bitter almond oil, synthetic  
- Phenylformaldehyde  
- Phenylmethanol aldehyde

</table>

**FLAVOR REQUIREMENTS:**

Due to the possible ingestion of small amounts of fragrance ingredients from their use in products in Categories 1 and 6, materials must not only comply with IFRA Standards but must also be recognized as safe as a flavoring ingredient as defined by the IOFI Code of Practice (www.iofi.org). For more details see chapter 1 of the Guidance for the use of IFRA Standards.

**CONTRIBUTIONS FROM OTHER SOURCES:**

SEE ANNEX ON CONTRIBUTIONS FROM OTHER SOURCES

**INTRINSIC PROPERTY DRIVING RISK**

DERMAL SENSITIZATION AND SYSTEMIC TOXICITY

**RIFM SUMMARIES:**

Maximum acceptable concentrations are based on a comprehensive safety assessment, considering various endpoints. Depending on the outcome of the safety assessment, it might be one or more endpoint(s) that will drive the derivation of the concentration levels. If more than one endpoint is of relevance, the maximum acceptable concentrations for each product category are derived from comparing maximum permitted level per endpoint consideration (e.g. dermal sensitization and/or systemic toxicity). Such maximum acceptable concentrations correspond to the lowest level obtained per category.

Additional information is available in the RIFM safety assessment for Benzaldehyde, which can be downloaded from the RIFM Fragrance Material Safety Assessment Center: http://fragrancematerialsafetyresource.elsevier.com/.

**EXPERT PANEL FOR FRAGRANCE SAFETY RATIONALE / CONCLUSION:**

The Expert Panel for Fragrance Safety reviewed all the available data for Benzaldehyde and recommends the concentrations for the 12 different product categories, which are the maximum acceptable concentrations of Benzaldehyde in the various product categories.
